CEO's Message

Providing cutting edge technology and superior quality

Making products that dentists want to use,
trust, and are satisfied with :
This is our mission at OSSEM IMPLANT

We are forever grateful to all the dentists who have given unwavering support to OSSTEM IMPLANT

Thank you for using Osstem Implant. Osstem, Korea's first implant manufacturer, has secured world-class implant competitiveness through continuous R&D investment and quality innovation.
It has grown to become Asia-Pacific No.1 and World No.5 Implant Company. In addition to dental implants and treatment tools, we are leading the development of products that are essential for dentists, including dental equipment, dental materials, and dental IT, and contribute to the development of the dental industry.
The comprehensive catalog of the 2018-19 product series published here shows Osstem's technology-rich products.
We have focused on catalog structure so that it is convenient to browse and order products. In particular, in the case of fixtures, abutments, and surgical tools, we introduced the diameter, length, and functions in detail.

GBR products are also easy to order by type, size and capacity. In addition, the product release date and time are displayed so that customers can understand when the existing product is released and what the newly released product is. We also introduced the CAD/CAM product in terms of preparing the digital dentistry, a major trend in the dentistry. In terms of design, we also implemented high-quality images of representative products by specification. By applying representative colors for each product system, it is easy to sort by category. We hope this will help you effectively find and purchase the products you need from the dental clinic of 2018-19. Osstem Implant will continue to develop products that the dentist can trust. We will work to create greater customer value. Thank you.

CEO of OSSTEM IMPLANT

Choi Kyu-ok (DDS.Ph.D)

Worldwide & History

1997

01 Established 'Osstem Co., Ltd.'

12 Released 'Doobunae' (health insurance claim application software program)

2000

06 Released 'Hanaro' (dentistry management software)

10 Acquired sumin comprehensive dental materials

2001

01 Obtained CE-0434 certification

03 Established AIC training center

2002

01 Established Osstem Implant R&D center

08 Obtained FDA certification, launched USII line

10 Launched SSII line

2006

03 Changed the company name to Osstem Implant Co., Ltd

04 Obtained GOST-R certification (russia)

12 Established 12 overseas branches (first round)

2007

02 Listed on KOSDAQ and began trading publicly

06 Selected as No.1 products for the next generation and obtained TGA certification (australia)

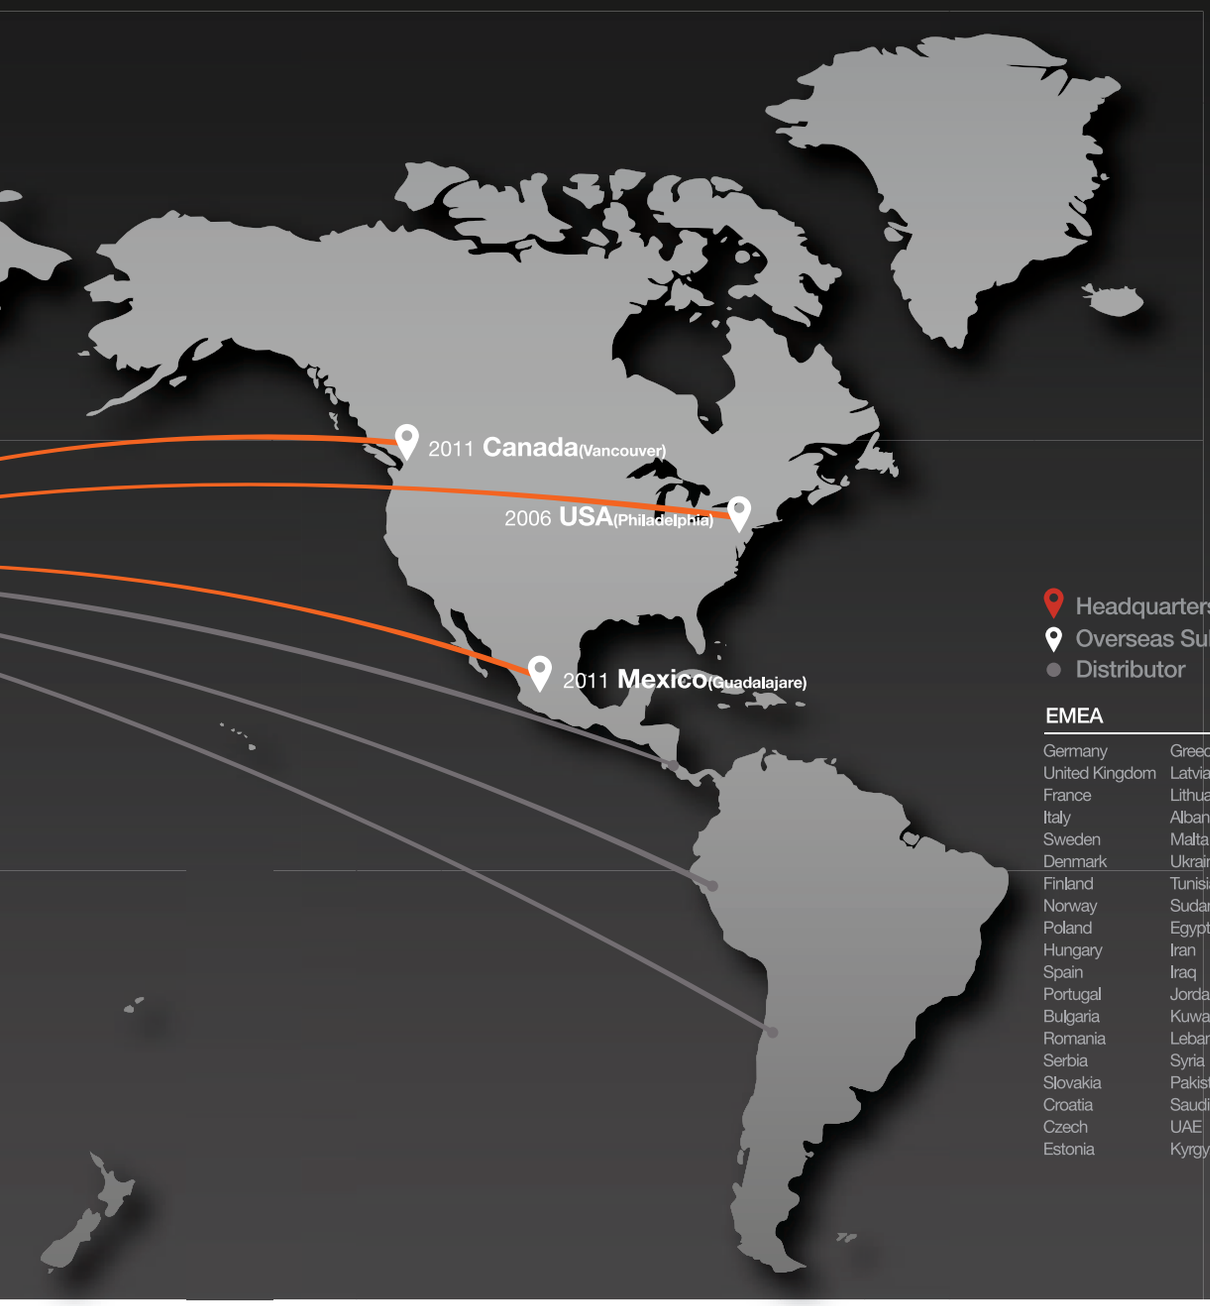
2008

01 Established osstem bone science research center

12 Selected as a managing organization for the national strategic technology development project

2009

10 Obtained approval for medical device manufacturing and sale from the ministry of health, labor and welfare, japan



Headquarters
Overseas Subsidiary
Distributor

EMEA

Germany, United Kingdom, France, Italy, Sweden, Denmark, Finland, Norway, Poland, Hungary, Spain, Portugal, Bulgaria, Romania, Serbia, Slovakia, Croatia, Czech, Estonia, Greece, Latvia, Lithuania, Albania, Malta, Ukraine, Tunisia, Sudan, Egypt, Iran, Iraq, Jordan, Kuwait, Lebanon, Syria, Pakistan, Saudi Arabia, UAE, Kyrgyzstan

ASIA / OCEANIA

China, South China, Hong Kong, Chinese Taipei, Japan, India, Russia, Kazakhstan, Thailand, Singapore, Malaysia, Indonesia, Vietnam, Philippines, Bangladesh, Cambodia, Sri Lanka, Myanmar, Mongolia, Australia, Papua New Guinea

N/S.AMERICA

USA, Canada, Mexico, Chile, Colombia, Peru, Costa Rica

2010

03 Launched TSIII SA line
06 Launched TSIII HA line

2011

06 Osstem Implant R&D center was selected as ATC (advanced technology center)
07 Selected as 'World Champ' business
12 Launched 'K2 unit chair', which was selected as a 'World Class Product'

2012

06 Launched TSIII CA line
07 Established osstem dental equipment research institute

2013

01 Launched osstem xenograft material 'A-Oss'
09 Launched 'K3 unit chair'
10 Selected as a 'Hidden Champion' company

2014

05 Selected as 'World Class 300'
05 Released 'HyFlex', an impression material
08 Released 'BeauTis' whitening material

2015

03 Established Osstem BioPharma Co., Ltd.
12 Awarded 'USD 50 Million Export Tower'

2016

01 Established Vussen Co., Ltd.
03 Acquired Cardiotec Co., Ltd.
08 Acquired Hubit Co., Ltd.
11 Launched OneGuide system

2017

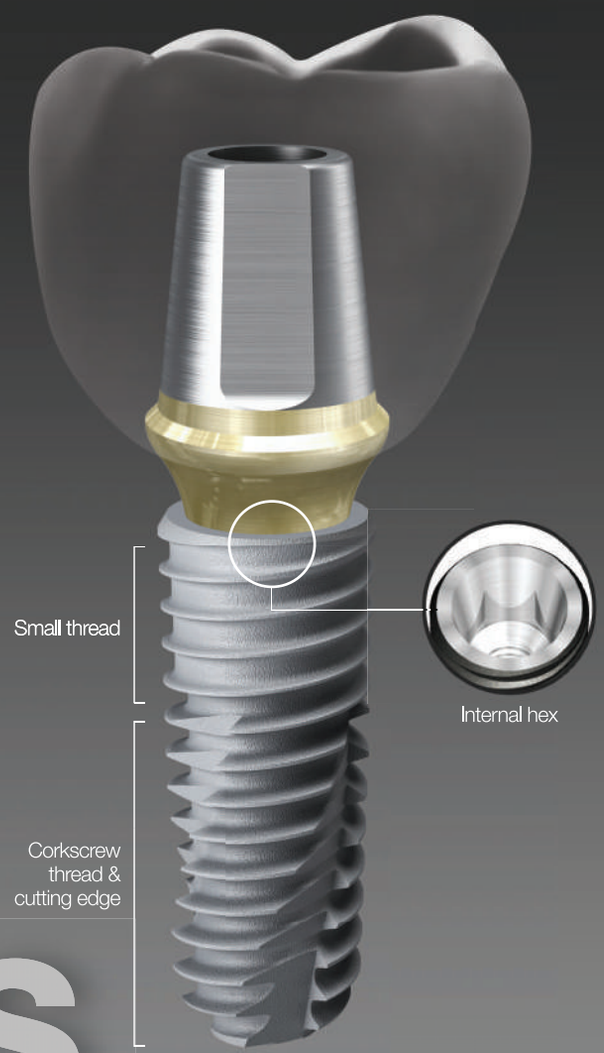
12 2017 presidential commendation for job creation

2018

01 TS exceeded 10 million production

OSSTEM Implant Design feature

OSSTEM IMPLANT has revolutionized implant dentistry in South Korea. With a focus on aggressive R&D, a commitment to education and a dedication to manufacturing the best products, Osstem Implant's ultimate goal is to become the global leader in implant dentistry.



TS

Each implant system has its own unique color code

Submerged type implant with an internal hex and 11˚tapered connection

- Internal connection type - Mini / Regular
- Excellent initial stability in soft bone due to smaller threads in the upper section
- Corkscrew thread with cutting edges
  - Strong self-threading effect for easy fixture path
  - Higher initial stability and consistent insertion torque
- Different body types to properly match the patient's bone quality and clinical condition
  - TSII (straight body) : easy to adjust depth
  - TSIII (1.5˚tapered body) : excellent initial stability necessary for immediate loading, even in soft bone
  - TSIV (6˚tapered body) : specifically designed for the maxillary sinus and soft bone, excellent initial stability
- Available surface types - SA / CA / HA / BA / SOI

Non-submerged type implant with an internal octa and 8˚tapered connection

- Internal connection type - Regular / Wide
- Corkscrew thread with cutting edges
  - Strong self-threading effect for easy fixture path
  - Higher initial stability and consistent insertion torque
- Different body types to properly match the patient's bone quality and clinical condition
  - SSII (straight body) : easy to adjust the insertion depth
  - SSIII (1.5˚tapered body) : excellent initial stability necessary for immediate loading, even in soft bone
- Available surface types - SA / CA / HA / BA

Submerged type implant with an external hex connection structure

- Internal connection type - Mini / Regular / Wide / Wide PS
- Corkscrew thread with cutting edges
  - Strong self-threading effect for easy fixture path
  - Higher initial stability and consistent insertion torque
- Different body types to properly match the patient's bone quality and clinical condition
  - USII (straight body) : easy to adjust the insertion depth
  - USIII (1.5˚tapered body) : excellent initial stability necessary for immediate loading, even in soft bone
  - USIV (6˚tapered body) : specifically designed for the maxillary sinus and soft bone, excellent initial stability
- Available surface types - SA / CA

OSSTEM Implant Surface feature

The key factor in providing implant treatment safely
and efficiently is surface technology.
OSSTEM IMPLANT is proud of
its cutting-edge surface technology.

Acid Treated Optimized Surface

- Ra 2.5~3.0㎛ surface roughness (note : the upper 0.5mm part of the implant has Ra 0.5~0.6um)
- Consistent surface micro pits between 1 to 3㎛
- Surface area is increased by 46 percent compared to RBM treated implants

Super-hydrophilic SA surface suspended in a calcium solution

- Same SA surface morphology
- Optimizing surface reaction by suspension in a calcium (CaCl2) solution
- Increased new bone formation area due to the excellent blood wettability
- Bone response improved in early osseointegration stage compared to standard SA surface

Premium high-crystalline HA-coated surface

- 30 to 60㎛ thick high-crystalline HA coating
- HA coated onto a RBM surface (Ra 3.0 to 3.5㎛)
- High HA crystalline over 98 percent
- Solved the problem with low-crystalline HA resorption

In-vitro & In-vivo Bone Response

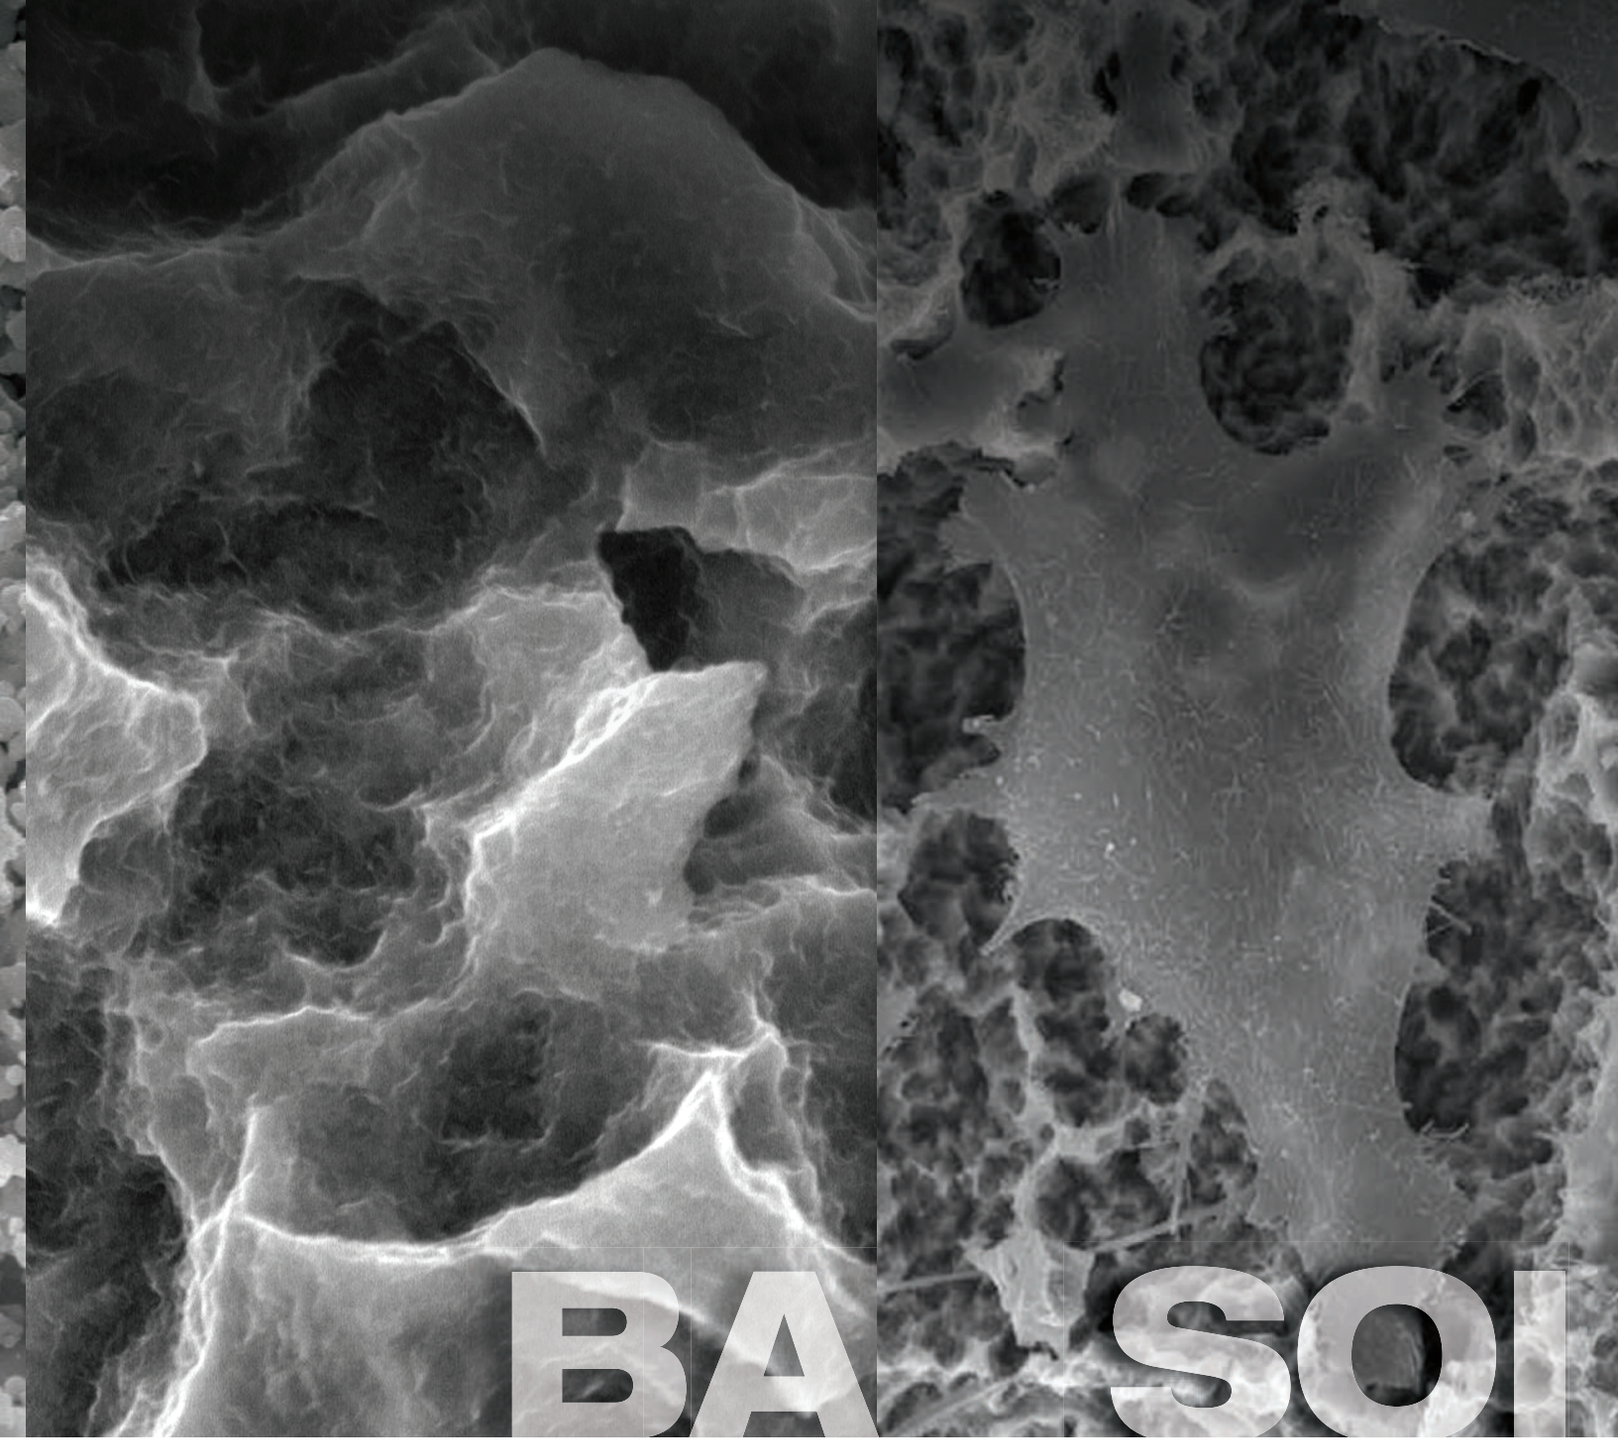
- 20% improvement in osteoblast separation and ossification compared to RBM
- Initial bone reaction performance in animal model (mini-pig)
  - 48% improvement in initial stability (RT, 4 weeks) compared to RBM
  - 20% improvement in ossification (BIC, 4 weeks) compared to RBM

In-vitro & In-vivo Bone Response

- Protein and cellular adhesion tripled compared to SA surfaces
- Initial cellular differentiation by 19 percent compared to SA surfaces (7 days)
- Initial stability increased by 34 percent compared to SA surfaces (RT at 4 weeks)
- Ossification rate Increased by 26 percent compared to SA surfaces (BIC at 4 weeks)

In-vitro & In-vivo Bone Response

- Excellent biocompatibility in HA that is similar to bone
- Initial ossification by osteoblasts doubled compared to SA surfaces (5 days)
- 40% improvement in initial stability (RT, 4 weeks) in animal models compared to SA
- Suitable for poor bone quality, tooth extraction sites or immediate implant insertion



Premium low crystalline nano-HA coated SA surface

· SA surface (Ra 2.5 to 3.0㎛) coated with HA
· 10nm ultra-thin HA coating
· Dual function between titanium and HA
  - HA is naturally resorbed during ossification

Next-generation surface coated with special material (K material)

· Activation of blood clot formation
· Avoid carbon adsorption in air
· Coating of K material on SA surface (Ra 2,0~3.0㎛)
· Superior blood wettability with super hydrophilic surface.

In-vitro & In-vivo Bone Response

· Advantages of both SA and HA surfaces
  - SA's ability to maintain an optimal surface
  - HA's ability to form high quality initial bone, even in a poor bone quality
· 40% improvement in ossification (BIC) compared to SA
· It is applicable to all types of bone quality

In-vitro & In-vivo Bone Response

· Protain and cellular adhesion 130 times increase compared to SA surface
· Initial stability increased by 57 percent compared to SA surfaces (RT at 4 weeks)
· Surface with the shortest duration of surgery

FIXTURE

COMPONENTS

TSIII SA Fixture

- A submerged type implant with internal hex and taper connection of 11°
- Optimal screw thread design for optimal SA surface implementation
- Taper body design with excellent initial fixation
- Highest initial stability in soft bone by using upper-part small thread
- Powerful self-threading effect with corkscrew thread
- Acquired initial fixation force for immediate loading in soft bone

Narrow

- Used in narrow ridge
- Compatible with mini abutment (except cover screw, mount, lab analog)

Ultra-wide

- Useful for posterior extraction and immediate implant placement case, and for replacement of failed implant case
- Optimized apex design ensures stable initial fixation force even at the extraction and bottom 3mm
- Recommended implant placement torque : below 40Ncm

※ In posterior single case, recommended at least ø4.5mm fixture

Nominal and actual diameters may slightly differ

Caution For a short implant, a sufficient healing period is strongly recommended. A short implant should be splinted with another implant when considering prosthetic options.

TSIII SOI Fixture

- Submerged type implant with an internal hex and 11° tapered connection
- K-material coated, blood-friendly superhydrophilic SA surface
- Rapid blood clot formation by super hydrophilicity
- Tapered body design with high initial stability
- Excellent initial stability in soft bone due to the small thread on the upper part
- Excellent self-threading effect with corkscrew thread
- Excellent initial stability necessary for immediate loading, even in soft bone
- Recommended insertion torque : ≤40 Ncm

※ Fixtures with a diameter of 4.5mm or more are recommended for the posterior area

Narrow

- Used in narrow widths
- Easy angle compensation
- Compatible with existing mini upper part (cover screw, mount, lab analog)

TSIV SA Fixture

- A submerged type implant with internal hex and taper connection of 11°
- Optimal screw thread design for optimal SA surface implementation
- Fixture for maxillary sinus and soft bone
- The effect of improving the initial fixation force in soft bone by applying the upper part small thread
- Powerful self-threading effect with corkscrew thread
- With a sharp apex design, it can be placed after D4 bone 2.0/3.0mm drilling

Ultra-wide

- Useful for posterior extraction and immediate implant placement case, and for replacement of failed Implant case
- Optimized apex design ensures stable initial fixation force even at the extraction and bottom 3mm
- Recommended implant placement torque : below 40Ncm

※ In posterior single case, fixture with diameter of 4.5mm or more is recommended

※ TSIV fixture is recommended to be lowered to 15rpm or less because the pitch of the thread is large and the implant placement speed is fast

OneFit Abutment

- Cement/combination-retained prosthesis
- CAD/CAM designed and milled customized abutments
- Fixture level impression
- Abutment level impression is possible when using scan healing abutment
- Lead time (in working days)
  - Titanium : 5 days
  - Titanium + gold color : 7 days
- Use a 1.2 hex driver
- Recommended tightening torque : 20Ncm(mini), 30Ncm(regular)
- Packing unit : abutment + EbonyGold screw

Scan Body

- Scan body for titanium custom abutment production
- For model scan : long (15mm)
- For intra oral scan : short (10mm)
- Use a 1.2 hex driver (torque manually)
- Packing unit : scan body + Ti screw

Locator® Core Tool

- Places and removes nylon retentive males in the denture cap
- Separates into three different tools, includes a hand driver for locator abutment

LCCT

Locator® Torque Driver

- A torque driver

Type	Short	Long
		
	TWLD**SK**	TWLD**LK**

OneSeal

OneSeal

- Disposable medical devices for internal filling of superstructure
- Cut to desired length (medical silicone)
- Packing unit : short 10ea / long 5ea

D \ H	50
Type	Long
Ø2.35	TSSE2350

Scan Healing Abutment

- Healing abutment with scan body function
- Specification by top maker shape (refer to table below)
- Abutment level impression
- Using a carrier, the scan healing abutment can be easily transported in the mouth
- It has screw for each length (not interchangeable)
- Use a 1.2 hex driver (torque manually)
- Packing unit : healing abutment body + screw

Abutment + Ti screw order code

Instructions for Use (AUG. 2017, Ver. 5.5)

Description of Osstem implant system

Osstem Implant is a brand for implant materials for dental practices, and the fixture is made mainly of titanium. The abutment, prosthetic components and tools for the Osstem Implant system are compatible with the Osstem Implant fixture only. Using this product in combination with products from other manufacturers may cause various problems including loosening and fracture due to incomplete locking and compatibility issues. Refer to the manual or the catalogue or our website (www.osstem.com) for details. See the product label for the product code, specifications, manufacturing date, and expiration date.

Sterility

The fixture, cover screw, and healing abutment are cleansed and sterilized with gamma radiation. This product is a disposable sterilized medical device intended for one-time use. In order to prevent contamination or infection of the product or operated site, the product must be used using a sterilized instrument in a sterilized environment. Damaged products, products with open packaging, or expired products must be discarded due to potential risks of contamination, infection, or osseointegration failure. Re-sterilization or re-use of the product may result in infection, osseointegration failure, or implant damage due to reduced accuracy.

Storage condition

Keep the product in a dry place at room temperature(1~30℃). Keep away from direct sunlight.

General precautions

The surgical technology of dental implant involves an expert, complex procedure. Formal training is required to perform implant surgery. Careful considerations must be made before the operation in case of bone disorders (osteoporosis, osteomalacia) or metabolic disorders of the bone.

Precautions

Determine the local anatomy and suitability of the available bone for implant placement. Prepare the implant considering the expected situations and cautions. Excessive occlusal load may cause loosening or fracture of an implant. In order to avoid this condition, the implant must be placed in accurate location and direction considering the relationship between the implant and opposing dentition. Visual inspection as well as panoramic and periapical radiographs are essential to determine anatomical landmarks, occlusal conditions, periodontal status, and the adequacy of the bone. Adequate radiographs, direct palpation, and visual inspection of the implant site are necessary prior to implant surgery.

Procedural precautions

Osstem Implant System is for single and two stage surgical procedures. As much as possible, try to minimize damage to the cell tissue and surgical trauma, pay special attention to maintaining the temperature at the implant site and removal of the source of contamination and infection. All drills and taps must be sufficiently and continuously irrigated for cooling during use. Implant placement should be accomplished at very low speed (25-30 rpm) or manually. Excessive torque (greater than 55Ncm) in the fixture placement can have adverse effects such as partial fracture or necrosis of the bone. Placing an implant tilted by 30˚ or higher is not recommended due to possible fracture of implant. Immediate loading to the fixture right after the surgery should be avoided. The bone quality and initial stability after fixture placement are important elements in determining the appropriate loading time. Mini-diameter implant or implant with diameter of 4.0 or less and which integrates with angled abutment may be fractured due to limitations of structural rigidity. They are not recommended for use in a posterior area. The Ultra-Wide fixtures are intended to be used only to replace molar teeth and that angled abutments are not to be used with the Ultra-Wide fixtures. Evaluate the quantity of bone and radiographs to assess any potential anatomical contraindications to use of the Ultra-Wide fixture. For the placement of the Short Implant (diameter is 5mm or more and length is shorter than 7mm) which is used on the molar region only, clinicians should closely examine the patients for any of the following conditions: 1) periimplant bone loss, 2) changes to implant's response to percussion, 3) radiographic changes in bone to implant contact along the implant's length. If a short implant shows mobility or greater than 50% bone loss, the implant should be considered for possible removal. And clinicians should consider a two-stage surgical approach, splinting a short implant to an additional implant, and placement of the widest possible fixture. Allow longer healing periods for osseointegration before fabrication of the prosthesis and avoid immediate loading. Products with diameter of 3.25mm or less must be used exclusively for mandibular anterior teeth in order to prevent fracture due to excessive occlusal load. It is recommended that you should avoid applying HA coated fixture to hard bone, and the insertion torque of the implant should be less than 35Ncm, because cracks or damages might occur in the coated layer during implant placement. The surfaces of CA and SOI have the same physical shape as the SA surface made through blasting and etching treatments. After the SA surface treatment, to prevent the products' exposure to the atmosphere, CA is stored in solution, whereas SOI is stored in water-film coating form; it is designed to maintain the chemically activated state of the SA surface. Thus, CA or SOI products should be implanted in the target region at least within 15 minutes of taking them out of the container.

Warning

The selection of inappropriate patients and surgical methods can cause implant failure or loss of bone supporting the implant. Osstem implants must not be used for purposes other than the recommended use and must not be remodeled. Implant mobility, bone loss, and chronic infection can result in failure of the implant surgery.

Indications for use

The Osstem Implant System is an artificial dental root that has been designed for use in dental implant treatment in order to recover lost teeth. The system is implanted via a surgical method in maxillary or mandibular bone to replace natural dental root. The Osstem Implant System is indicated for use in partially or fully edentulous mandibles and maxillae, in support of single or multiple-units restorations including; cemented retained, screw retained, or overdenture restorations, and final or temporary abutment support for fixed bridgework. It is intended for delayed loading. Products with diameter of 3.25mm or less must be used exclusively for mandibular anterior teeth in order to prevent fracture due to excessive occlusal load.

Side effects

A few problems may occur after the operation (loss of implant stability, damage of prosthesis, etc.). Deficient quality and quantity of the remaining bone, infection, allergic reaction, inferior oral hygiene or uncooperativeness of patient, implant mobility, partial deterioration of tissue, and improper position or arrangement of implants may cause the above mentioned problems.

Contraindications

Contraindications include the following, but are not limited to:

- Patients with hemophilia or difficulties related to bone or wound treatment
- Patients with uncontrollable diabetes, heavy smoker or alcoholic
- Patients whose immunity system is inactive due to chemical therapy or radiation therapy
- Patients with oral infection or inflammation (improper oral hygiene, bruxism)
- Patients with untreatable occlusion/joint disorder, insufficient dental arch space
- Any patient who is not suitable for an surgery
